                                                                                                                                                                                                                                                                                             ö
                                                                                          DNA (AAT08480) coding for humanised CDR-grafted scFv CB (AAR77607) was derived from DNA of hybridoma ATCC HB 11625, the producer of anti-C5 monoclonal antibody (MAb) 561.1. The DNA was subcloned into vector PET Trc SO5/NI for expression in Escherichia coli. The light and/or heavy chain CDRs of scFv CB can be combined with CDRs from other 561.1-derived antibodies, Fds and light chains (AAR77607-16) in the prodn. of recombinant, including humanised, antibodies that retain the ability of MAb 561.1 to block human complement C5a generation and thus to reduce glomerular inflammation and kidney dysfunction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            540

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DNA (AAT08479) coding for murine scFv 5G1.1M1 (AAR77606) was obtd. by PCR cloning of DNA from hybridoma ATCC HB 11625, the producer of anti-C5 monoclonal antibody (MAD) 5G1.1. The DNA was subcloned into pET Trc SOS/NI for expression in Escherichia coli. The 119ht and/or heavy chain CDRs of scFv 5G1.1M1 can be combined with CDRs from other 5G1.1-derived antibodies, Fds and light chains (AAR77607-16) in the prodn. of recombinant, including humanised, antibodies that retain the ability of MAD 5G1.1 to block human complement C5a generation and thus to reduce glomerular inflammation and kidney dysfunction associated with glomerulonephritis.

                                                                                                                                   A DNA construct (AAT08483) codes for a humanised CDR-grafted and framework sequence-altered Fd 5G1.1 VH + IGHRL (AAR77610), which includes CDRs derived from mouse anti-C5 monoclonal antibody 5G1.1. The DNA can be subcloned together with DNA (AAT08484) coding for a humanised light chain (AAR77612) into vector APEX 3P (AAT08476) for expression of humanised antibody in human 293 EBNA cells. Such recombinant antibodies retain the ability of MAD 5G1.1 to block human complement C5a generation and thus to reduce glomerular inflammation and kidney dysfunction associated with

The DNA can be subcloned together with DNA (AAT08484) coding for a humanised Fd (AAR77611) into vector APEX-3P (AAT08476) for expression of humanised antibody in human 293 EBNA cells. Such recombinant antibodies retain the ability of MAb SG1.1 to block human complement C5a generation and thus to reduce glomerular inflammation and kidney dysfunction associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Treating glomerulonephritis with antibody against complement component - to inhibit complement induced cell lysis

The DNA can be subcloned together with DNA (AAT08484) coding for a humanised light chain (AAR77612) into vector APEX-3P (AAT08476) for expression of humanised antibody in human 293 EBNA cells. Such recombinant antibodies retain the ability of MAb 5G1.1 to block human complement C5a generation and thus to reduce glomerular inflammation and kidney dysfunction associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Treating glomerulonephritis with antibody against complement component - to inhibit complement induced cell lysis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Wang

The DNA can be subcloned together with DNA (AAT08483) coding for a humanised Fd (AAR7761) into vector APEx.3P (AAT08476) for expression of humanised antibody in human 293 EBNA cells. Such recombinant antibodies retain the ability of MAD 5G1.1 to block
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Treating glomerulonephritis with antibody against complement C5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DB 16; Length 726;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         human complement C5a generation and thus to reduce glomerular inflammation and kidney dysfunction associated with glomerulonephritis.

                                        A DNA construct (AAT08486) codes for a humanised CDR-grafted light chain, designated 5G1.1 VL + 012 (AAR77614), which includes CDRs derived from mouse anti-C5 monoclonal antibody 5G1.1. The DNA can be subcloned together with DNA (AAT08484) coding for a humanised Fd (AAR77611) into vector APEX-3P (AAT08476) for

The DNA can be subcloned together with DNA (AAT0843) coding for a humanised Fd (AAR77610) into vector APEX-3P (AAT08476) for expression of humanised antibody in human 293 EBNA cells. Such recombinant antibodies retain the ability of MAb 5G1.1 to block human complement C5a generation and thus to reduce glomerular inflammation and kidney dysfunction associated with

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence encodes a fusion of the single chain antibody huNR-LU-10 and streptavidin. The antibody binds the antigen EGP40 or EPCAM. The fusion protein is expressed using vectors of the invention. The specification describes vector constructs for expressing streptavidin fusion proteins. The vector comprises a first nucleic acid encoding streptavidin or its functional variant operatively linked to a promoter, and a cloning site for insertion of a second nucleic acid sequence encoding a polypeptide to be fused with streptavidin, interposed between the promoter and the first nucleic acid sequence. Alternatively, the vector construct comprises a first nucleic acid, operatively linked to a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           promoter, encoding a polypeptide to be fused with streptavidin, and a cloning site for insertion of a second nucleic acid encoding at least 129 amino acids of streptavidin or its functional variant. The fusion proteins are useful for targeting tumour cells, particularly tumour ce associated with cancer, e.g. adenocarcinomas or hematological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      malignancies. The vector construct is useful for expressing of streptavidin fusion proteins. In particular, these are useful as tools for medical diagnostics and therapeutic purposes, e.g. for detecting the presence or absence of, or treating, a target site within a mammalian
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            07-JUN-1999;

They comprise a first Fv fragment bound to at least one other Fv fragment by a linker which keeps the Fv fragment apart. The connecting structure of AAR20184 comprises a joining sequence derived from a human IgG1 domain linked to a complete human IgG4 hinge region. AAR20185 is the sequence of the shortened hinge version of the B72.3 single chain Fv

```

receptor comprising an intracellular signalling domain, a transmembrane domain and an extracellular domain, the extracellular domain comprising a CD20-specific receptor. The genetically engineered CD20-specific redirected T cells are useful for treating a CD20+ malignancy, such as non-Hodgkin's lymphoma or CD20+ acute or chronic leukemia, in a human patient having previously undergone myeoablative chemotherapy and stem cell rescue. The genetically engineered CD20-specific redirected T cells are also useful for abrogating an untoward B cell function, such The present sequence encodes a synthetic CD20-specific chimeric receptor. The specification describes CD-20 specific redirected T cells which express and bear on the cell surface membrane a CD20-chimeric as autoimmune disease (lupus or rheumatoid arthritis) in BP; 471 541 G; 359 ; 0 other; മ patient.

cc least one complementary determining region (CDR) of a variable region of can antibody which specifically interacts with the extracellular domain of ct the human zeta-chain. The antibody whose CDR of a variable region is cc encoded by (I), is obtained by immunising a rat with jurkat cells and cc peptide having 11 N-terminal amino acids of a rat zeta-chain. The antibody is useful for the treatment and prevention of canti-zeta-chain antibody is useful for the treatment and prevention of cc infectious diseases, immune deficiencies, T-cell malignancies, in corder to avoid graft rejection after organ transplantation, malignancies, cc or viral infections. The antibody, and fragments of it, can be useful for the enhancement or suppression of NK-cell dependent immunity or for the ct treatment of NK-cell derived malignancies. It can also be useful for the cc treatment of zeta-chain or eta-chain expression on NK-cells, cc T-lymphocytes or their precursors. The present sequence encodes a construction of the constant or the constant sequence encodes a constant of the constant constant invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           present invention describes a nucleic acid molecule (I)

                                                                                                                                                                                                                                  consisted of the entire v and J region of one chain (heavy or light) linked to the entire v and J segment of the other (light or heavy) via a 15 amino acid flexible peptide. The scab was assembled in two orientations (see AAQ42284 and AAQ42285). A fusion construct prepared in which the natural sequence gelonin gene was positioned at the N-terminus and the SLT or RMA linker peptide was positioned
                                                                                                                                                                                                                                                                                                                                                                      Analogues of type I ribosome inactivating protein - useful as cytotoxic agents, immuno toxins for treating auto immune diseases, cancer, graft versus host disease and selective cell killing in-vivo

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence encodes a recombinant immunotoxin comprising a CD3-binding domain and a Pseudomonas exotoxin A component. It is designated scFv(UCHT-1)-PE28. The immunotoxins of the invention are used for the prophylaxis or treatment of T-cell mediated diseases or conditions of the immune system. They are also used to condition a patient to be transplanted with cells, or a tissue or an organ of a donor and for the prophylaxis and/or treatment of acute or chronic transplantation rejection, host versus graft disease and/or graft versus host disease in a patient to undergo a bone marrow transplant, where the CD3-bearing cell population in the patient is depleted and an inoculum comprising isolated bone marrow and/or stem-cell enriched peripheral blood cells of the donor treated with immunotoxin is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Recombinant immunotoxin used for prophylaxis and treatment of T-cell mediated diseases e.g. transplantation rejection -

                                                                                                                                                                                                                                                                                 Sequence 89, Applicati
Patent No. 6146631
GENERAL INFORMATION:
                                                                                                                                                                                                     APPLICANT: Better, Marc D.

APPLICANT: Carroll, Stephen F.

APPLICANT: Studnika, Gary M.

TITLE OF INVENTION: Immunotoxins Comprising Ribosome-Inactivating TITLE OF INVENTION: Proteins
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0,
CURRENT APPLICATION DATA:
                                                                                                                                                                            NUMBER OF SEQUENCES: 1
